

Laser Therapy

Laser therapy uses specific wavelengths of light (red and near-infrared) to create therapeutic effects. During each painless treatment, laser energy increases circulation, drawing water, oxygen, and nutrients to the damaged area. This leads to accelerated cell growth and tissue repair and faster wound healing. Laser therapy creates an optimal healing environment that reduces inflammation, scar tissue formation, swelling, muscle spasms, stiffness, and pain.

Numerous studies have shown that laser therapy can help with:

- Osteoarthritis
- Joint pain
- Neck and back pain
- Hip dysplasia
- Post-surgical pain and healing
- Burns
- Wounds
- Rehabilitation
- Muscle strains
- Tendon injuries
- Edema and congestion

Other conditions that may benefit from laser therapy include:

- Acral lick granulomas
- Abscesses
- Anal sacculitis / infections
- Deep tissue infections
- Hot spots
- Otitis (ear infection)
- Aural hematoma
- Feline asthma / bronchitis
- Cystitis (bladder inflammation)
- Feline rhinitis, sinusitis, upper respiratory infection
- Feline stomatitis / gingivitis
- Severe periodontal disease
- Pancreatitis / inflammatory bowel disease
- Post immiticide heartworm treatment

How many treatments are needed?

Although improvement is often seen after the first visit, most patients require several treatments (3 to 8) for greatest benefit. For most patients we recommend the following treatment schedule:

- Every other day for 1 week (3 total)
- Twice the second week (2 total)
- Once the third week (1 total)
- Then boosters as needed
